

Repair your Internet connection with Diagnose and repair

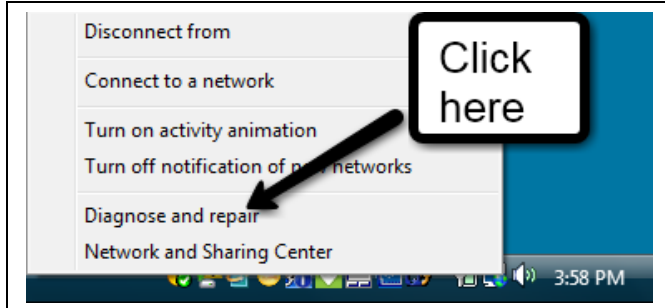

Windows Vista Version

This will only work for minor issues for example, a program caused your internet connection to fail.

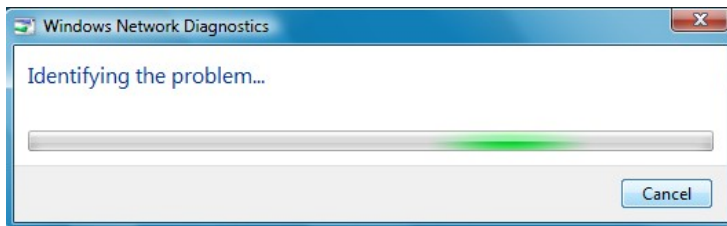

Step 1: Right click on  in the right hand corner of your screen.

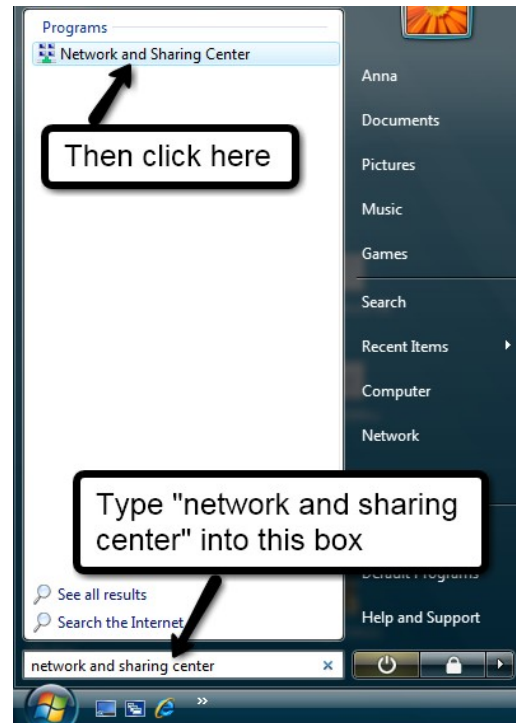

Step 2: Click **Diagnose and repair**

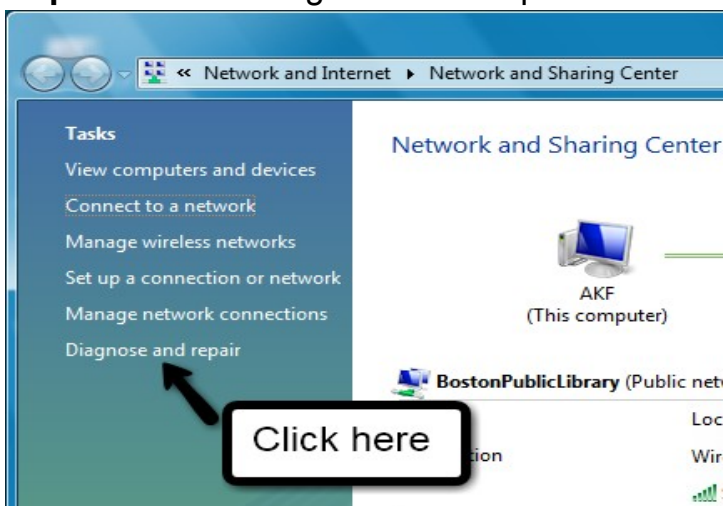

Step 3: Let Windows Network Diagnostics identify the problem.

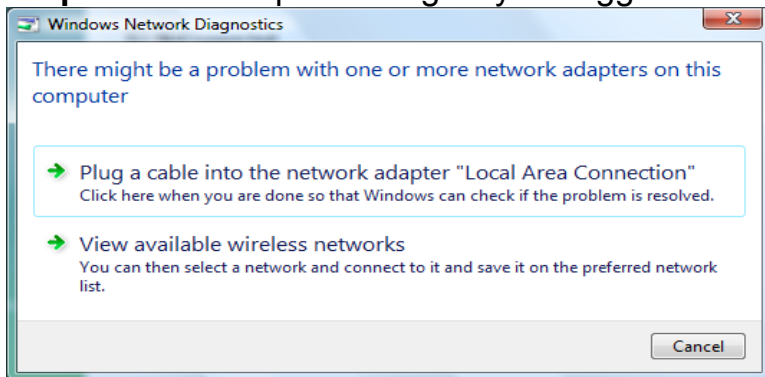

Step 4: If you cannot find a network icon, , click on the start menu, , and type “network and sharing center” into the search box. Then click  Network and Sharing Center .

Step 5: Click on Diagnose and Repair.

Step 6: The computer will give you suggestions on how to fix the problem.

If Diagnose and Repair does not work then you may want to restart your computer.
