NEPC, LLC

# Introduction

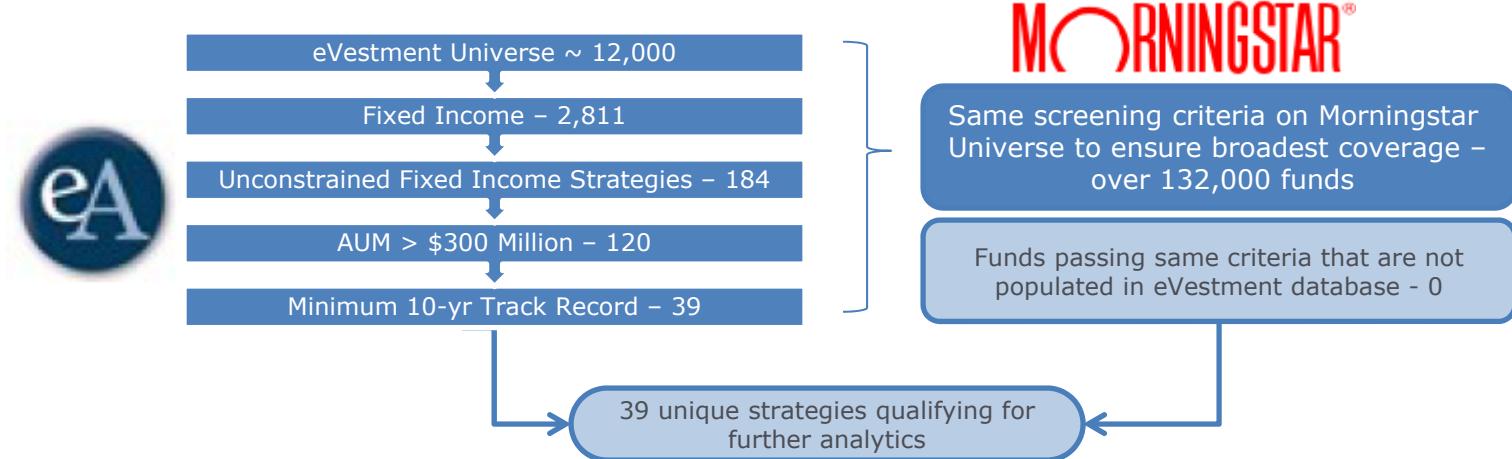

**NEPC's investment manager research process identifies a Focused Placement List of preferred strategies representing the strategies that we expect will provide superior investment performance over time. Our four step process used for identifying our Focused Placement List includes:**

1. Universe Screening – Minimum inclusion criteria and screening are used to focus our analysis;
2. Quantitative Scoring – Proprietary quantitative analysis measuring the consistency and quality of alpha-only, net of fees returns;
3. Qualitative Research – Rigorous qualitative analysis of a strategy's key characteristics, focusing on identification of a clear and differentiating investment thesis to develop forward-looking conviction in future performance; and
4. Peer Review – Confirmation through careful peer review of each strategy by senior investment professionals to challenge each investment thesis and raise critical business issues.

**We believe that this exhaustive process leads to identification of strategies with a reasonable probability of delivering consistent, high quality investment results.**

### 1. Universe Screening

- The construction of the Focused Placement List begins with initial universe screening to identify candidates that meet acceptable criteria for further analysis.

### 2. Quantitative Scoring

- Although we use our proprietary Performance Analytics Statistical Software (PASS) to help us identify potential strategies to research further, multi-sector fixed income is an evolving asset class. Product track records vary in length, and benchmarking products that may employ very different investment styles is challenging.

### 3. Qualitative Research

- Deep, qualitative research is conducted on a focused set of strategies identified through scoring and supplemented by our research teams' knowledge of strategies that appear compelling for further research.
- Our research efforts are focused on developing a deep understanding of each strategy's people, philosophy, & process, synthesizing those aspects into our interpretation of each strategy's investment thesis – the identification of a particular set of market inefficiencies and the conviction in a portfolio management team's ability to exploit those inefficiencies over the long-term, thereby, adding value over the benchmark.
- By focusing on investment thesis, our research remains forward-looking, supporting this investment view with critical knowledge of each organization, investment team, research support, investment process, performance expectations, and fees/available investment vehicles to identify strategies that we believe will provide quality excess returns above the relevant benchmark.

### 4. Peer Review

- The research process culminates in exhaustive peer review. The Fixed Income Advisory Group provides feedback and insight to the research team prior to vetting preferred strategies in front of senior research and consulting professionals on NEPC's Due Diligence Committee. The research team presents each Focused Placement List candidate to the Due Diligence Committee. The committee challenges both the soundness of the investment thesis (NEPC's articulation of why the strategy is expected to outperform over the long-term) and all relevant factors that might effect the long-term stability of the strategy, including business factors at the firm level. Candidates approved by the Due Diligence Committee are placed on the Focused Placement List and included in searches conducted for that asset class.

## Search Candidates

**The following is a list of managers under consideration for this search. The table below summarizes the products proposed for each manager.**

Firm	Strategy	Comments
<b>Absolute Return Fixed Income</b>		
Payden & Rygel	Payden Absolute Return Investing	Composite Track Record Shown
<b>Global Multi-Sector Fixed Income</b>		
Loomis, Sayles & Company, L.P.	Multisector Full Discretion	Composite Track Record Shown
Manulife Asset Management	Strategic Fixed Income	Composite Track Record Shown

*Details regarding securities lending are available from the manager upon request.*

### **Data Disclosure:**

- The results profiled herein reflect the deduction of management fees and other expenses, except where specifically noted.
- Investment fees can have a significant effect on total returns.

### **Footnotes:**

- Proposed Vehicles:
  - Payden & Rygel is willing to waive the \$50 million minimum investment for the proposed mutual fund.

## Firm and Product Summary

**The following pages address portfolio-specific characteristics.**

- **Firm and Product Summaries:**

- On these pages, several portfolio characteristics are listed. The data here should match what you may already know about the manager: do they have the staff to research this many ideas? How large is their trading staff if portfolio turnover is significant? How do they define their universe?

## Firm and Product Summary

<b>Firm/Product</b>	<b>Firm/Team Comments</b>	<b>Investment Style/Strategy</b>	<b>Performance Expectations</b>	<b>Portfolio Positioning</b>	<b>Other Comments</b>
<b>Absolute Return Fixed Income</b>					
Payden & Rygel - PARI	Strategy is managed by a stable team of three senior portfolio managers Brian Matthews, Scott Weiner and Brad Boyd, and the Investment Policy Committee comprises of 10 senior investors.	PARI is a best-ideas, full-tool-kit portfolio. Strategy has a strong emphasis on income and downside protection, with little interest rate exposure. Portfolio is constructed with a stable core, a tactical trading overlay, and hedging as insurance.	PARI is a best-ideas, full-tool-kit portfolio. Strategy has a strong emphasis on income and downside protection, with little interest rate exposure. Portfolio is constructed with a stable core, a tactical trading overlay, and hedging as insurance.	Strategy duration range is -2 to 5 years. Emerging markets and non-agency positions are limited to 40%, while high yield maximum exposure is 50%. Foreign currency is limited to 10% of the fund.	A majority women-owned firm, though not registered as such.
<b>Global Multi-Sector Fixed Income</b>					
Loomis - Multisector FD	Product is managed by the Full Discretion portfolio management team consisting of Dan Fuss, Matt Egan, and Elaine Stokes	MSFD is a best-ideas strategy across the Loomis fixed income research platform; product has a heavy tilt towards corporate bonds, both investment grade, international and high yield	Strategy will lag during credit bear markets, but will perform exceeding well during periods of spread tightening	High yielding, return seeking, credit oriented strategy; will hold hybrid securities such as convertible bonds and preferred equity	Most aggressive credit manager on list; best paired with a lower volatility strategy
Manulife - Strategic FI	Managed by a team of three portfolio managers, with support from the various sector teams	Strategic Fixed Income is a top-down global fixed income and currency strategy; the strategy's Asia footprint is a differentiator for Manulife	Expect performance to lag during credit bear markets and at times be less directional due to currency positions	High yielding, return seeking fixed income strategy with an emphasis on credit and currency. Duration will typically be lower than the benchmark	Strategy will give clients a full spectrum exposure to the global fixed income and currency markets

# NEPC Investment Thesis

Firm/Product	NEPC Investment Thesis
<b>Absolute Return Fixed Income</b>	
Payden & Rygel - PARI	Sticking to their core strengths of a consistent team-based approach, their deep expertise in low duration, and a history of achieving stable, income-oriented returns, the PARI team builds a defensible income core of a highly diversified and rigorously vetted global portfolio, to which they then add an outer layer of medium-term thematic and shorter-term tactical views, and protect it with tail hedging. Central to the consistency of PARI's alpha add is the balanced, diversified make-up of the core, the conservative nature of the team, and their emphasis on portfolio insurance with an annual budget set aside for macro hedging.
<b>Global Multi-Sector Fixed Income</b>	
Loomis - Multisector FD	The Multisector Full Discretion strategy represents the best ideas across the global fixed income markets as identified by the Loomis Sayles fixed income organization. Loomis' team of experienced credit analysts cover all parts of an issuer's capital structure, and all issuers in a specific industry, making each analyst a specialist in their respective industry. Analysts are charged with developing a nuanced position on each credit, with the objective to develop a thesis on the credit before the marketplace and rating agencies can react. Loomis' team of portfolio managers will tactically allocate to portions of the global bond market where the best relative value opportunities exist. It is therefore a combination of the security selection recommendations from the credit analyst group, the enhanced yield of the portfolio from its historic credit bias, and the tactical nature of the portfolio where clients will recognize value-added.
Manulife - Strategic FI	Manulife's Strategic Fixed Income strategy will add value through the team's high conviction sector positions in high yield bonds, global sovereign bonds, and emerging markets debt. Guidelines are flexible and allow for a balance of risks, but also to strongly express active views. The three person management team has a good balance of specialization and background (currency, corporate credit and risk management), and it is the management team, gathering input from Manulife's Asia offices on currency and government policy, combined with the credit research team that provide informational advantages.

Firm/Product	Internal ESG Research Utilized (Y/N)	Third Party ESG Research Utilized (Y/N)	Manager Explanation of Research Methodologies Used
<b>Absolute Return Fixed Income</b>			
Payden & Rygel - PARI	Yes	Yes	As a firm, we embed ESG considerations in all aspects of our investment process and consider it an important part of fundamental analysis. In particular, we use the Sustainable Accounting Standards Board's (SASB) "industry standards" as a touchstone for organizing our ESG thinking at the issuer level. Our analysts and portfolio managers consider ESG issues whenever they depend on or undertake fundamental analysis. In particular, we focus on factors such as: *Transparency of management *Board independence *Executive compensation *Reputation *Employee-employer relations *Employee safety *Pollution impact *Climate change In addition, we utilize the services of third-party ESG related data providers to further aid to our research process.

# Performance

# Introduction to Performance Analysis

The following performance charts show the historical record for the strategies under consideration. To manage client portfolios, each manager has a range of offerings (separate accounts, commingled funds or mutual funds) that allow all types of clients access to the strategy at reasonable prices.

## **Trailing Period Returns and Calendar Year Returns:**

These pages highlight a manager's performance for quarter, year to date, 1, 3, 5, 7 & 10 year periods as well as calendar year returns.

## **Performance Summary:**

These pages highlight a manager's excess performance over various periods. All managers are also shown from the inception of the shortest record referred to as LCD or Least Common Denominator.

## **Return Histogram:**

These charts display the frequency of a manager's monthly excess performance data.

## **Rolling One Year and Three Year Excess Returns:**

These charts demonstrate the manager's demonstrated relative performance versus the benchmark over time. Using each manager's one year return and subtracting the one year benchmark return shows how each manager has performed relative to the relevant benchmark. The same method is used for the three year charts.

## **Rolling One Year and Three Year Excess Return Versus Benchmark:**

These charts demonstrate the manager's demonstrated relative performance behavior over up and down equity markets. The charts are displayed in order of benchmark performance along the X-Axis rather than chronological order. By looking at the Y-Coordinate you can determine whether or not the manager added or detracted value versus the benchmark over that one year period. Each dot represents the one year excess return versus the relevant benchmark. The same method is used for the three year charts.

## **Risk/Return Performance Charts:**

These charts show the risk and return of the candidates and indices for 3, 5, 7 & 10 year periods.

# Litigation

Firm	Manager's explanation of Prior or Pending Litigation
<b>Absolute Return Fixed Income</b>	
Payden & Rygel	There is no prior or pending litigation.
<b>Global Multi-Sector Fixed Income</b>	
Loomis, Sayles & Company, L.P.	The Loomis Sayles Credit Alpha Fund was named as a defendant along with all former shareholders of the Tribune Corporation (the Company) that received cash in exchange for shares of the Company in a public-to-private leveraged buyout in 2007 (the LBO). The Fund received \$1,190,000 for the shares it owned at the time of the LBO. Within one year of the LBO, the company filed for Chapter 11 bankruptcy. Pre-bankruptcy bondholders and unsecured creditors seek to recover all amounts paid to the shareholder defendants (Defendants) in connection with the LBO, with pre-bankruptcy interest, alleging that the LBO constituted a fraudulent conveyance by the Company. The entirety of this litigation, consisting of approximately 40 lawsuits, has been consolidated in federal district court in New York. The Fund is a member of a joint defense group formed by Ropes & Gray, which represents several similarly situated defendants. A settlement offer, which would have involved Defendants agreeing to repay 57.2% of the proceeds received, was rejected on the advice of counsel as premature, at the high end of the range of reasonableness, and not in the best interests of the Fund. In April 2014, the presiding judge ordered Ropes & Gray, on behalf of shareholder defendants (including Loomis) to file a Global Motion to Dismiss. The motion was filed in May 2014. In March 2016, the United States Court of Appeals for the Second Circuit dismissed the plaintiffs' claim of constructive fraudulent conveyance arising under state law. The plaintiffs will likely seek an appeal of this decision to the Supreme Court of the United States. The plaintiff's second claim, for intentional fraudulent conveyance arising under federal law, remains in federal district court. Past Firm Litigation (within ten years) In December, 2011, a complaint was filed in the U.S. District Court for the District of Colorado naming Loomis Sayles as a co-defendant along with its affiliate, Natixis Distributors, L.P. The complaint alleged that the use by Loomis Sayles of a name for a mutual fund that it manages, and Natixis distributes, was likely to cause customer confusion, constituted unfair competition, and represented an infringement of a service mark registered by another investment advisor on the Principal Register of the United States Patent and Trademark Office. Loomis Sayles and Natixis entered into a settlement with the Plaintiff on August 3, 2012.

NEPC, LLC

# Litigation

Firm	Manager's explanation of Prior or Pending Litigation
<b>Global Multi-Sector Fixed Income</b>	
Manulife Asset Management	<p>During the past 12 months* Manulife Asset Management has not been the subject of any litigation, formal investigation or administrative proceedings related to its investment management activities that were either materially adverse to the Firm's business operations or had a materially unfavorable outcome to the Firm. As an affiliate of a global organization, our affiliates are at times involved in litigation both as a defendant and as a plaintiff. Litigation naming a Manulife Financial Corporation entity as a defendant ordinarily involves its activities as a provider of insurance protection and wealth management products, or as an investment adviser, employer or taxpayer. In addition, government and regulatory bodies in Canada, the United States and Asia, including provincial and state regulatory bodies, state attorneys general, the United States Securities and Exchange Commission ( SEC ), the Financial Industry Regulatory Authority (formerly National Association of Securities Dealers, Inc.) and Canadian provincial securities commissions regularly make inquiries and, from time to time, require the production of information and conduct examinations concerning the organization's compliance with, among other things, insurance laws, securities laws, and laws governing the activities of broker-dealer practices. None of our affiliates' litigation or investigation matters are believed to be material to Manulife Asset Management's ability to provide investment management services. *As of June 30, 2017. Updated semiannually.</p>

## Glossary of Terms

**Beta:** A measure of volatility, or systematic risk, of a security or a portfolio in comparison to the market as a whole. Beta can be thought of as the tendency of a security's returns to respond to swings in the market. A beta of 1 indicates that the security's price will move with the market. A beta of less than 1 indicates that the security's price will be less volatile than the market.

**Correlation:** A statistical measure of how two securities move in relation to each other. Correlation is computed into a correlation coefficient which ranges between -1 to +1. A perfect positive correlation (+1) implies that as one security moves either up or down, the other security will move in the same direction. Alternatively, a perfect negative correlation (-1) means that if one security moves in either direction the security that is perfectly negatively correlated will move by an equal amount in the opposite direction.

**Information Ratio:** A measure of portfolio management's performance against risk and return relative to a benchmark or alternative measure.

**Kurtosis:** A statistical measure used to describe the distribution of observed data around the mean. Kurtosis describes trends in charts. A high kurtosis portrays a chart with fat tails and a low, even distribution, whereas a low kurtosis portrays a chart with skinny tails and a distribution concentrated toward the mean.

**Skewness:** A statistical term used to describe a situation's asymmetry in relation to a normal distribution. A positive skew describes a distribution favoring the right tail, whereas a negative skew describes a distribution favoring the left tail.

**Tracking Error:** A divergence between the price behavior of a position or a portfolio and the price behavior of a benchmark. Tracking errors are reported as a "standard deviation percentage" difference. It tells you the difference between the return you received and that of the benchmark you were trying to copy.
